Kenya Natural Disaster Profile

Basic Facts:
- Area: 582,650 km²
- GDP (PPP): $33.03 billion
- Coastline: 536 km
- GDP Per Capita: $1,000
- Population: 32,021,856
- Population Below Poverty Line: 50%

Natural Disaster Risk Hotspots:
- Droughts
- Floods
- Landslides

Natural Disaster Risk Hotspots (Weighted by Proportion of GDP Impacted)

Multi-Hazard Disaster Risk Hotspots (All Hazards combined and weighted by Mortality and Proportion of GDP Impacted)

Multi-Hazard Disaster Risk Hotspots by Hazard Groups (Top Three Deciles)
Observations

*Droughts and floods are the most significant hazards affecting Kenya. The maps exclude hazard impacts in non-agricultural areas where small populations were masked out of the maps. Although droughts and floods show large impacts when weighted by mortality, the effects of droughts are more severe, particularly in the north. When weighted by GDP impact, droughts pose a substantially higher risk than floods throughout the country.*
