by **5 May 2016**

You are invited to a two-day symposium to celebrate Lamont's role in the plate tectonics revolution and the continuing advances in our understanding of plate tectonics over the past 50 years.

An important goal of the symposium is to give students and early career scientists a taste of the excitement of being in the vanguard of a scientific revolution. The meeting will honor a number of scientists who contributed to the early development and confirmation of the theories that led to plate tectonics. It will include scientific presentations by distinguished scientists who were involved in plate tectonics from the beginning and those who continue to investigate plate tectonics processes today.
