

LDEO LAB SAFETY GRAM

9/28/12—These dangerous items were found on the ground outside the Marine Biology Building. How they got there remains a mystery; though they likely fell out of a trash bag during nightly trash collection.

Please do **NOT** put any sharp items such as broken glass or pipette tips into the regular trash.

Broken glass that does not contain chemical residuals is to go into the Broken Glass Containers.

Any contaminated glass or pipettes with chemical residue is to be put into the blue labeled, white plastic 5 gallon pails.

Glass or Plastic pipettes or other sharp items that could puncture the skin are to be placed into rigid, plastic containers labeled "Sharps".

Contact the LDEO Safety Office if you need any such containers or require disposal of any of these materials. Thank you.

LDEO SAFETY OFFICE
