

Solid Earth Dynamics

Bill Menke, Instructor

Lecture 17

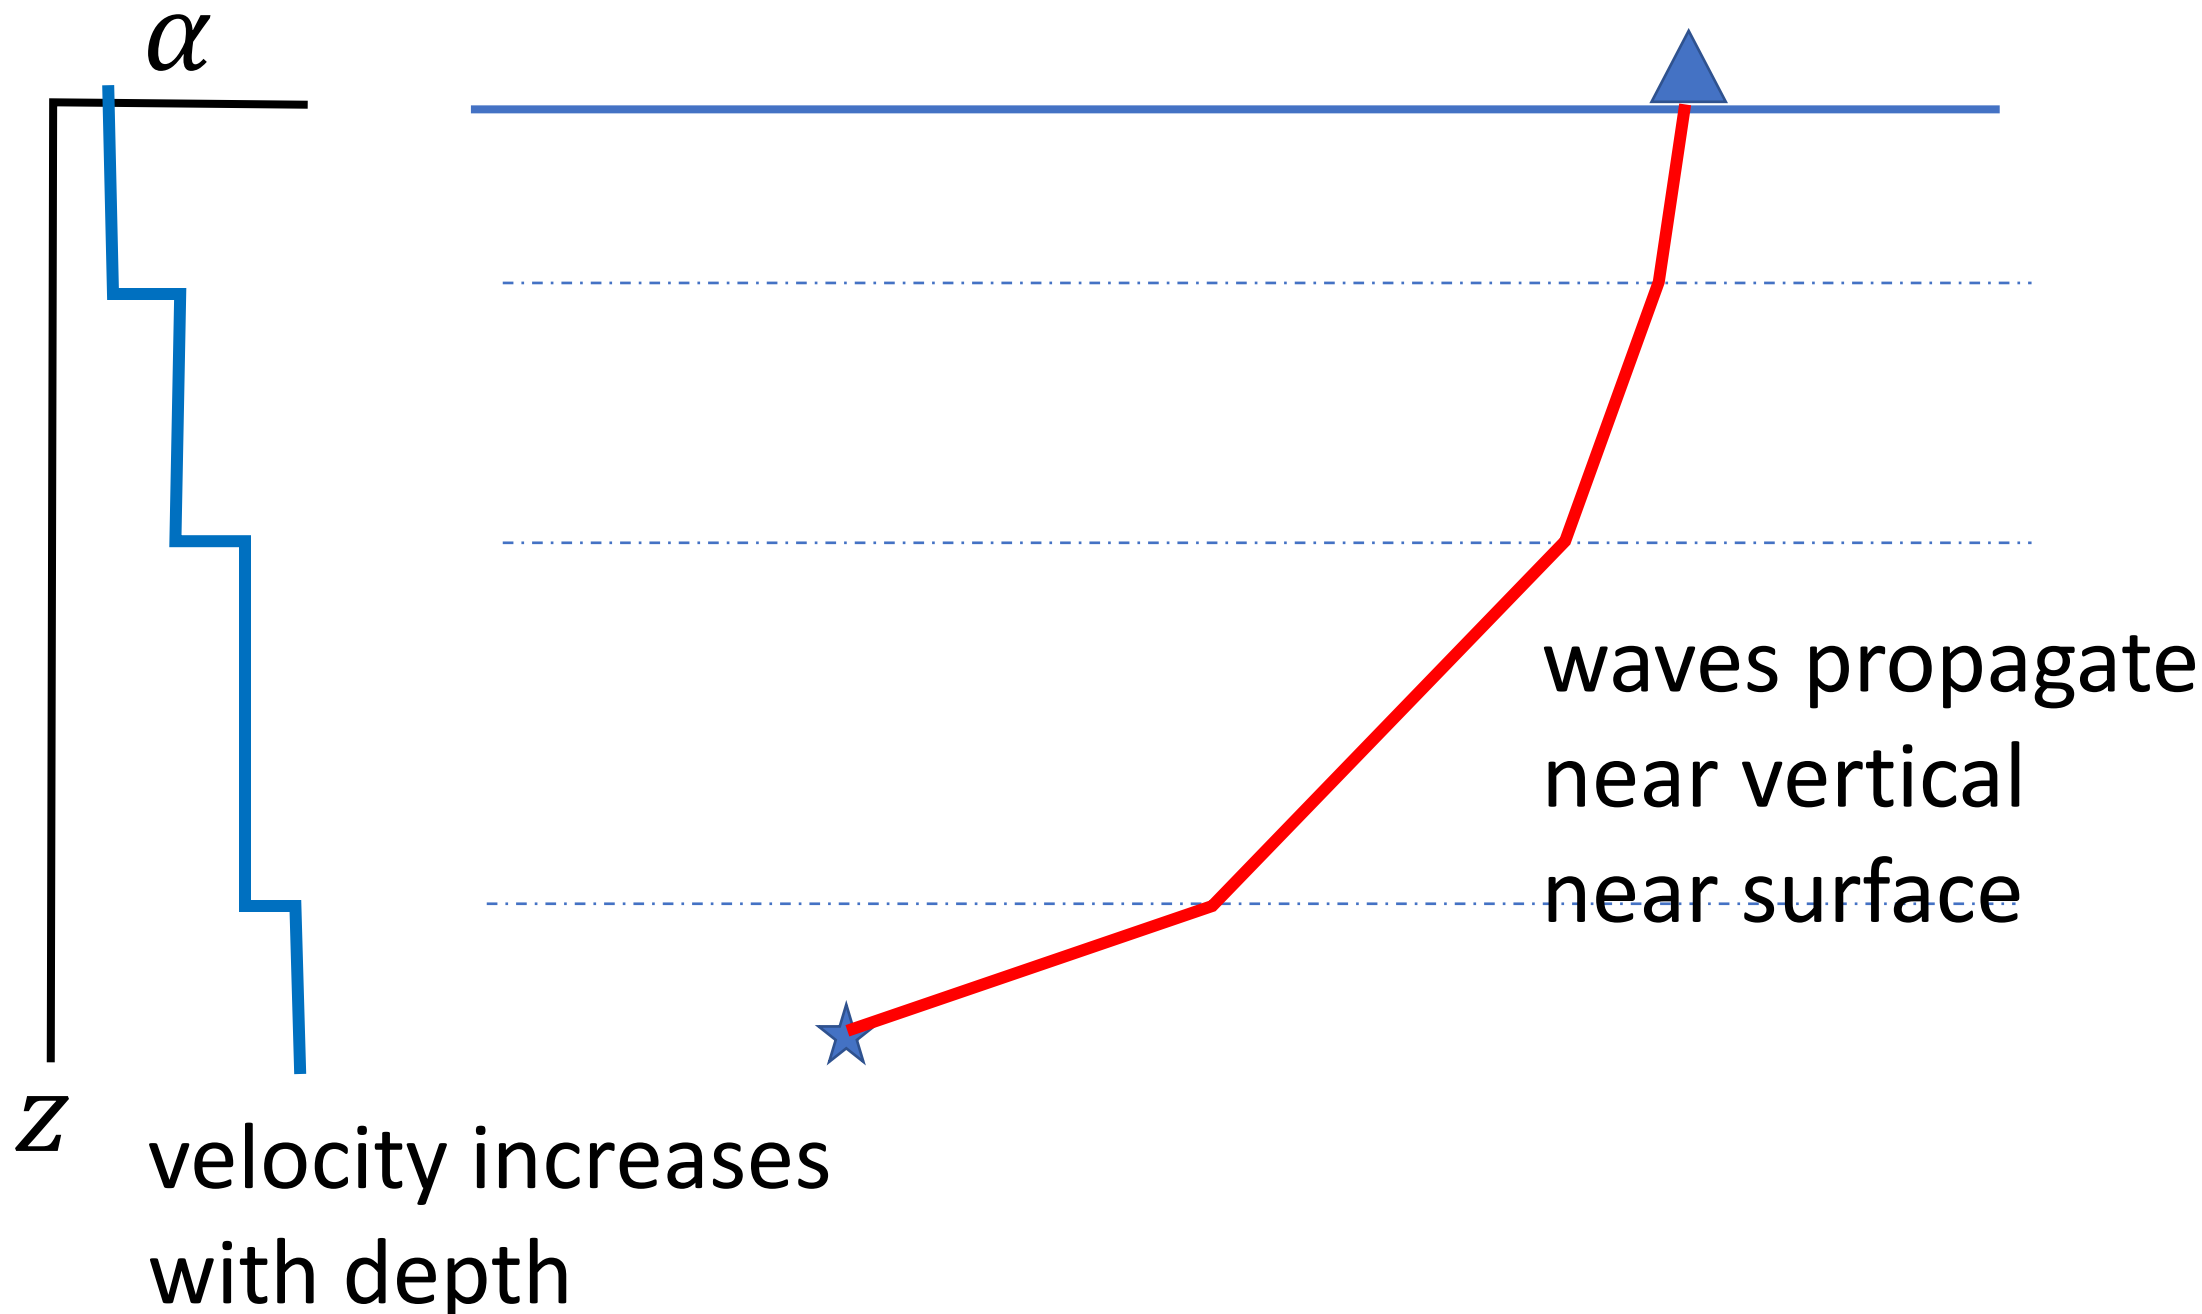

1. P and S waves in the Earth

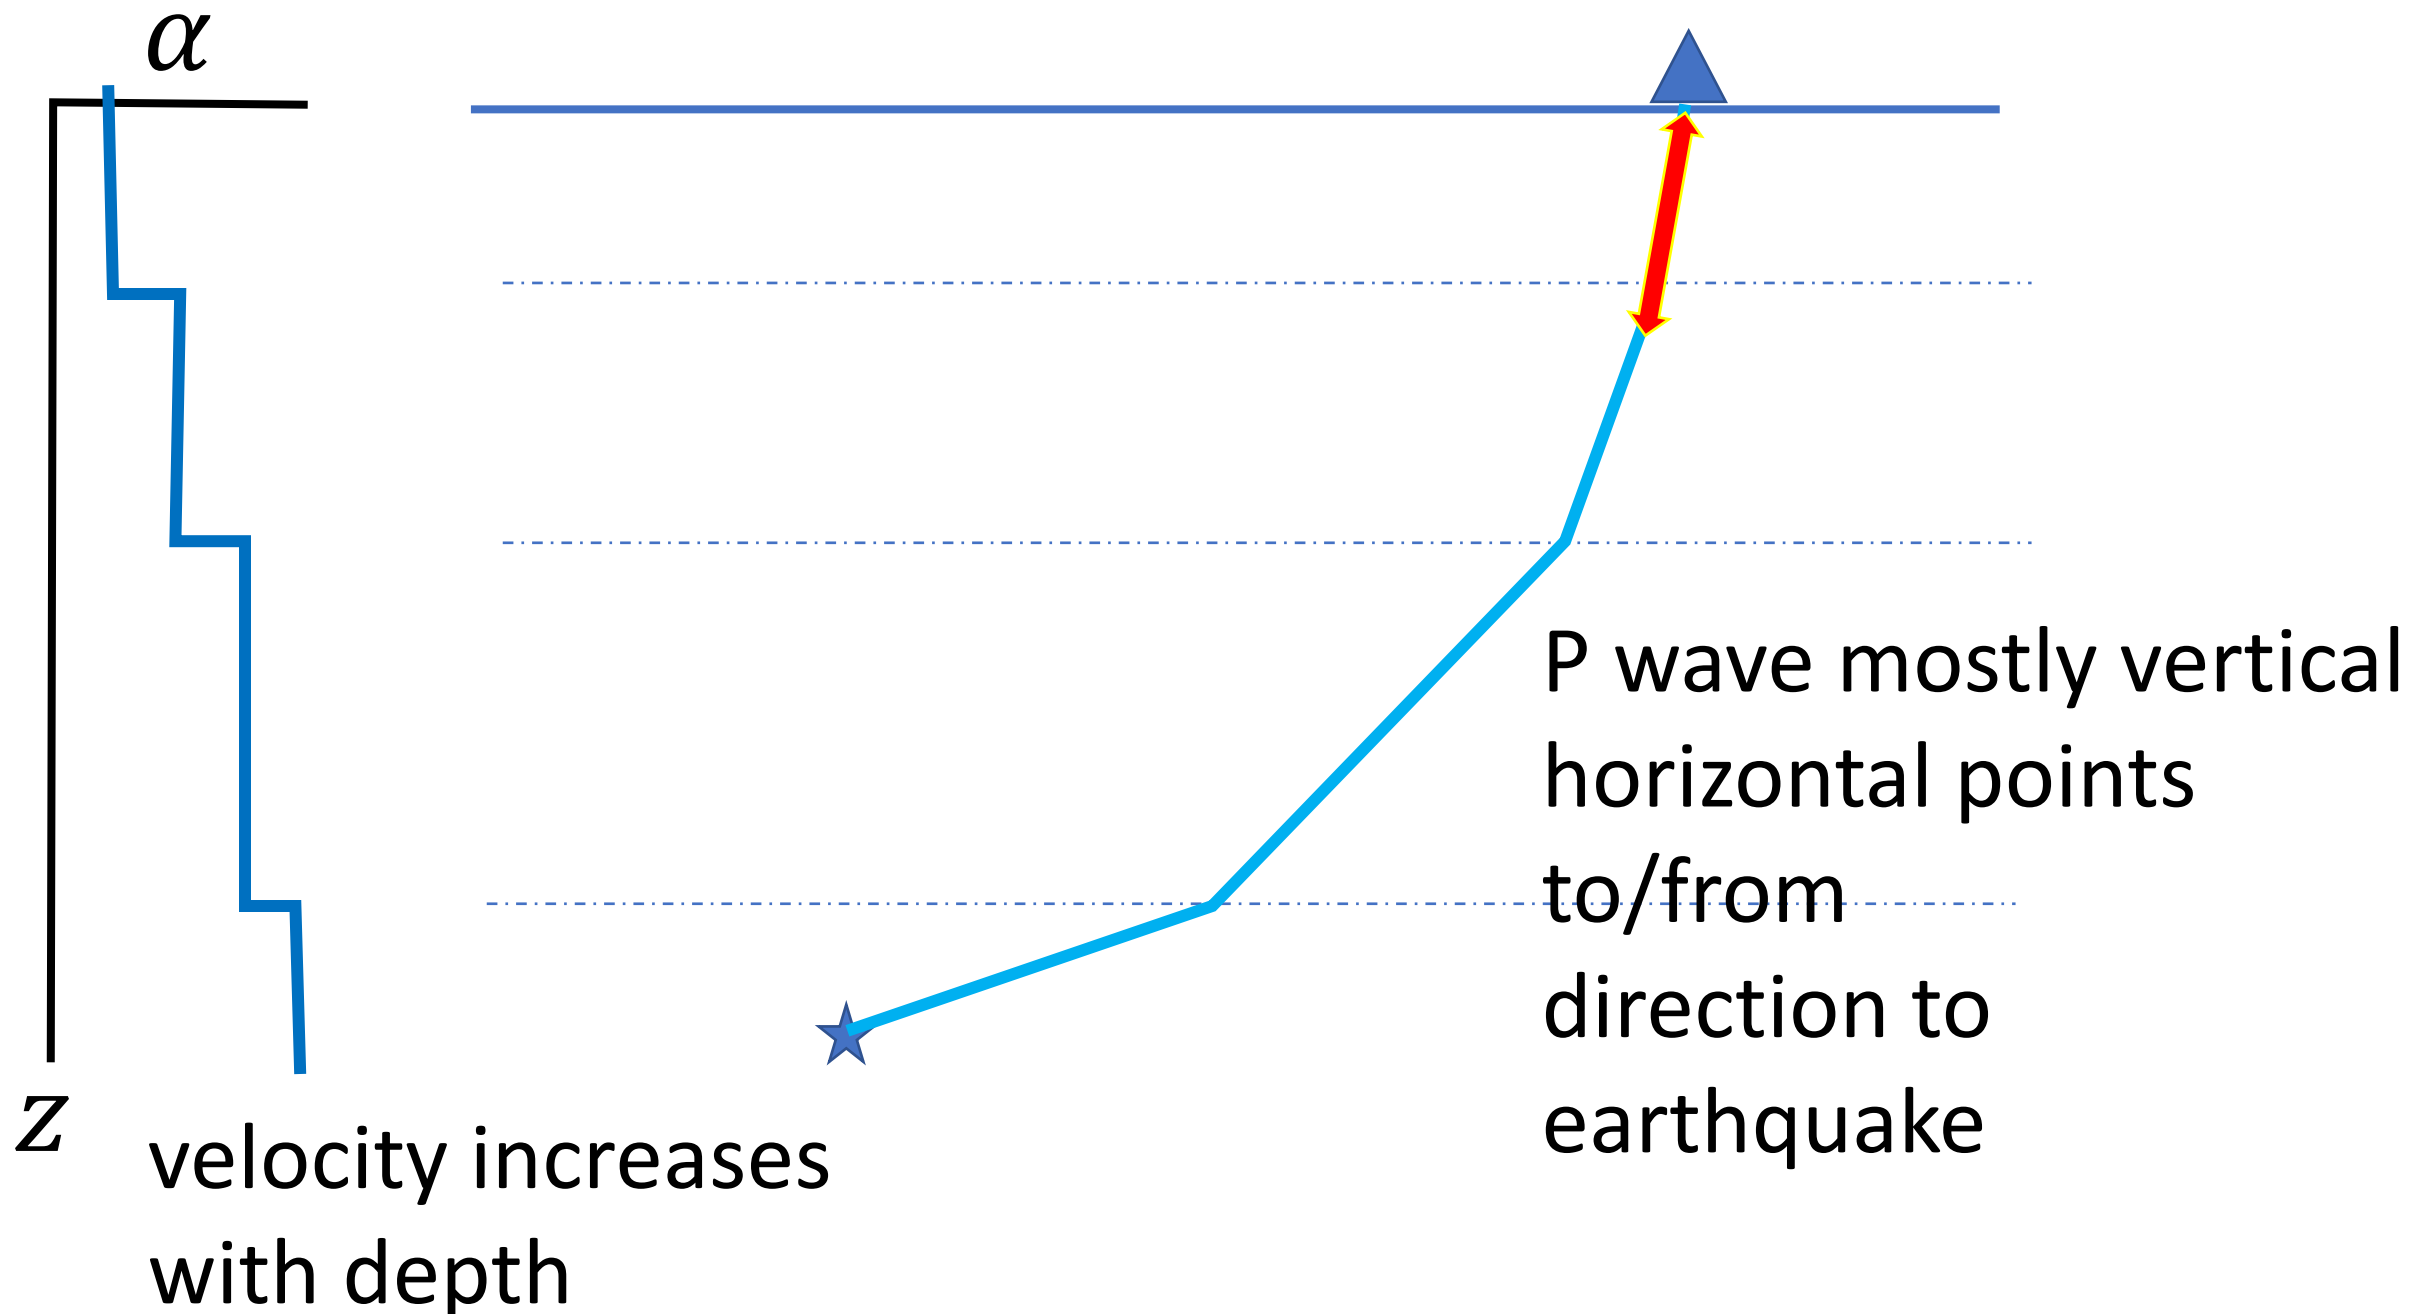

Compressional wave

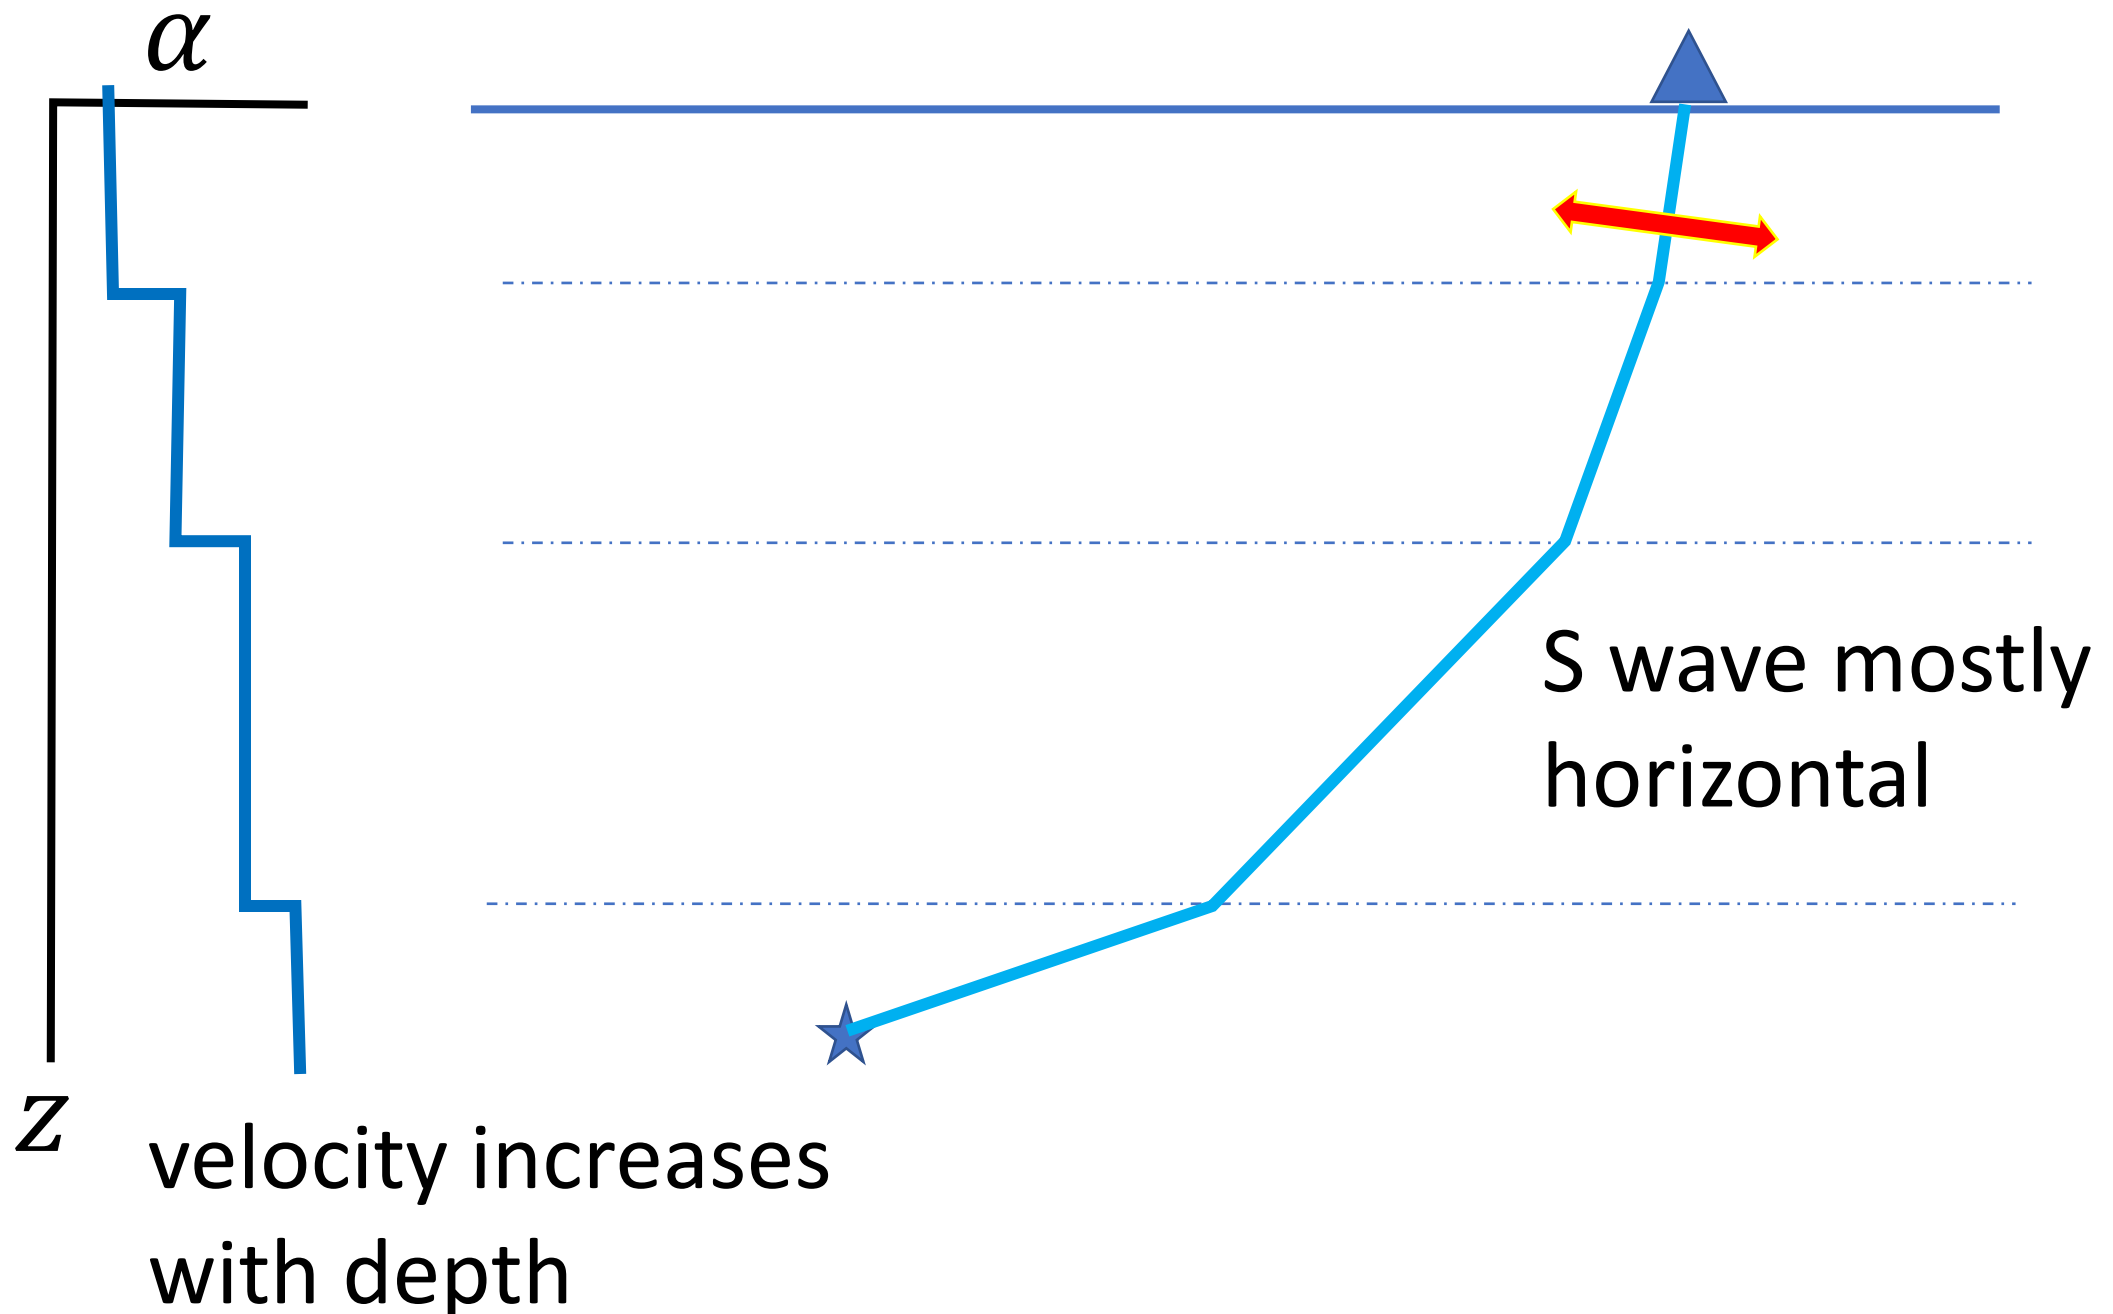

displacement parallel to propagation
“longitudinally-polarized”

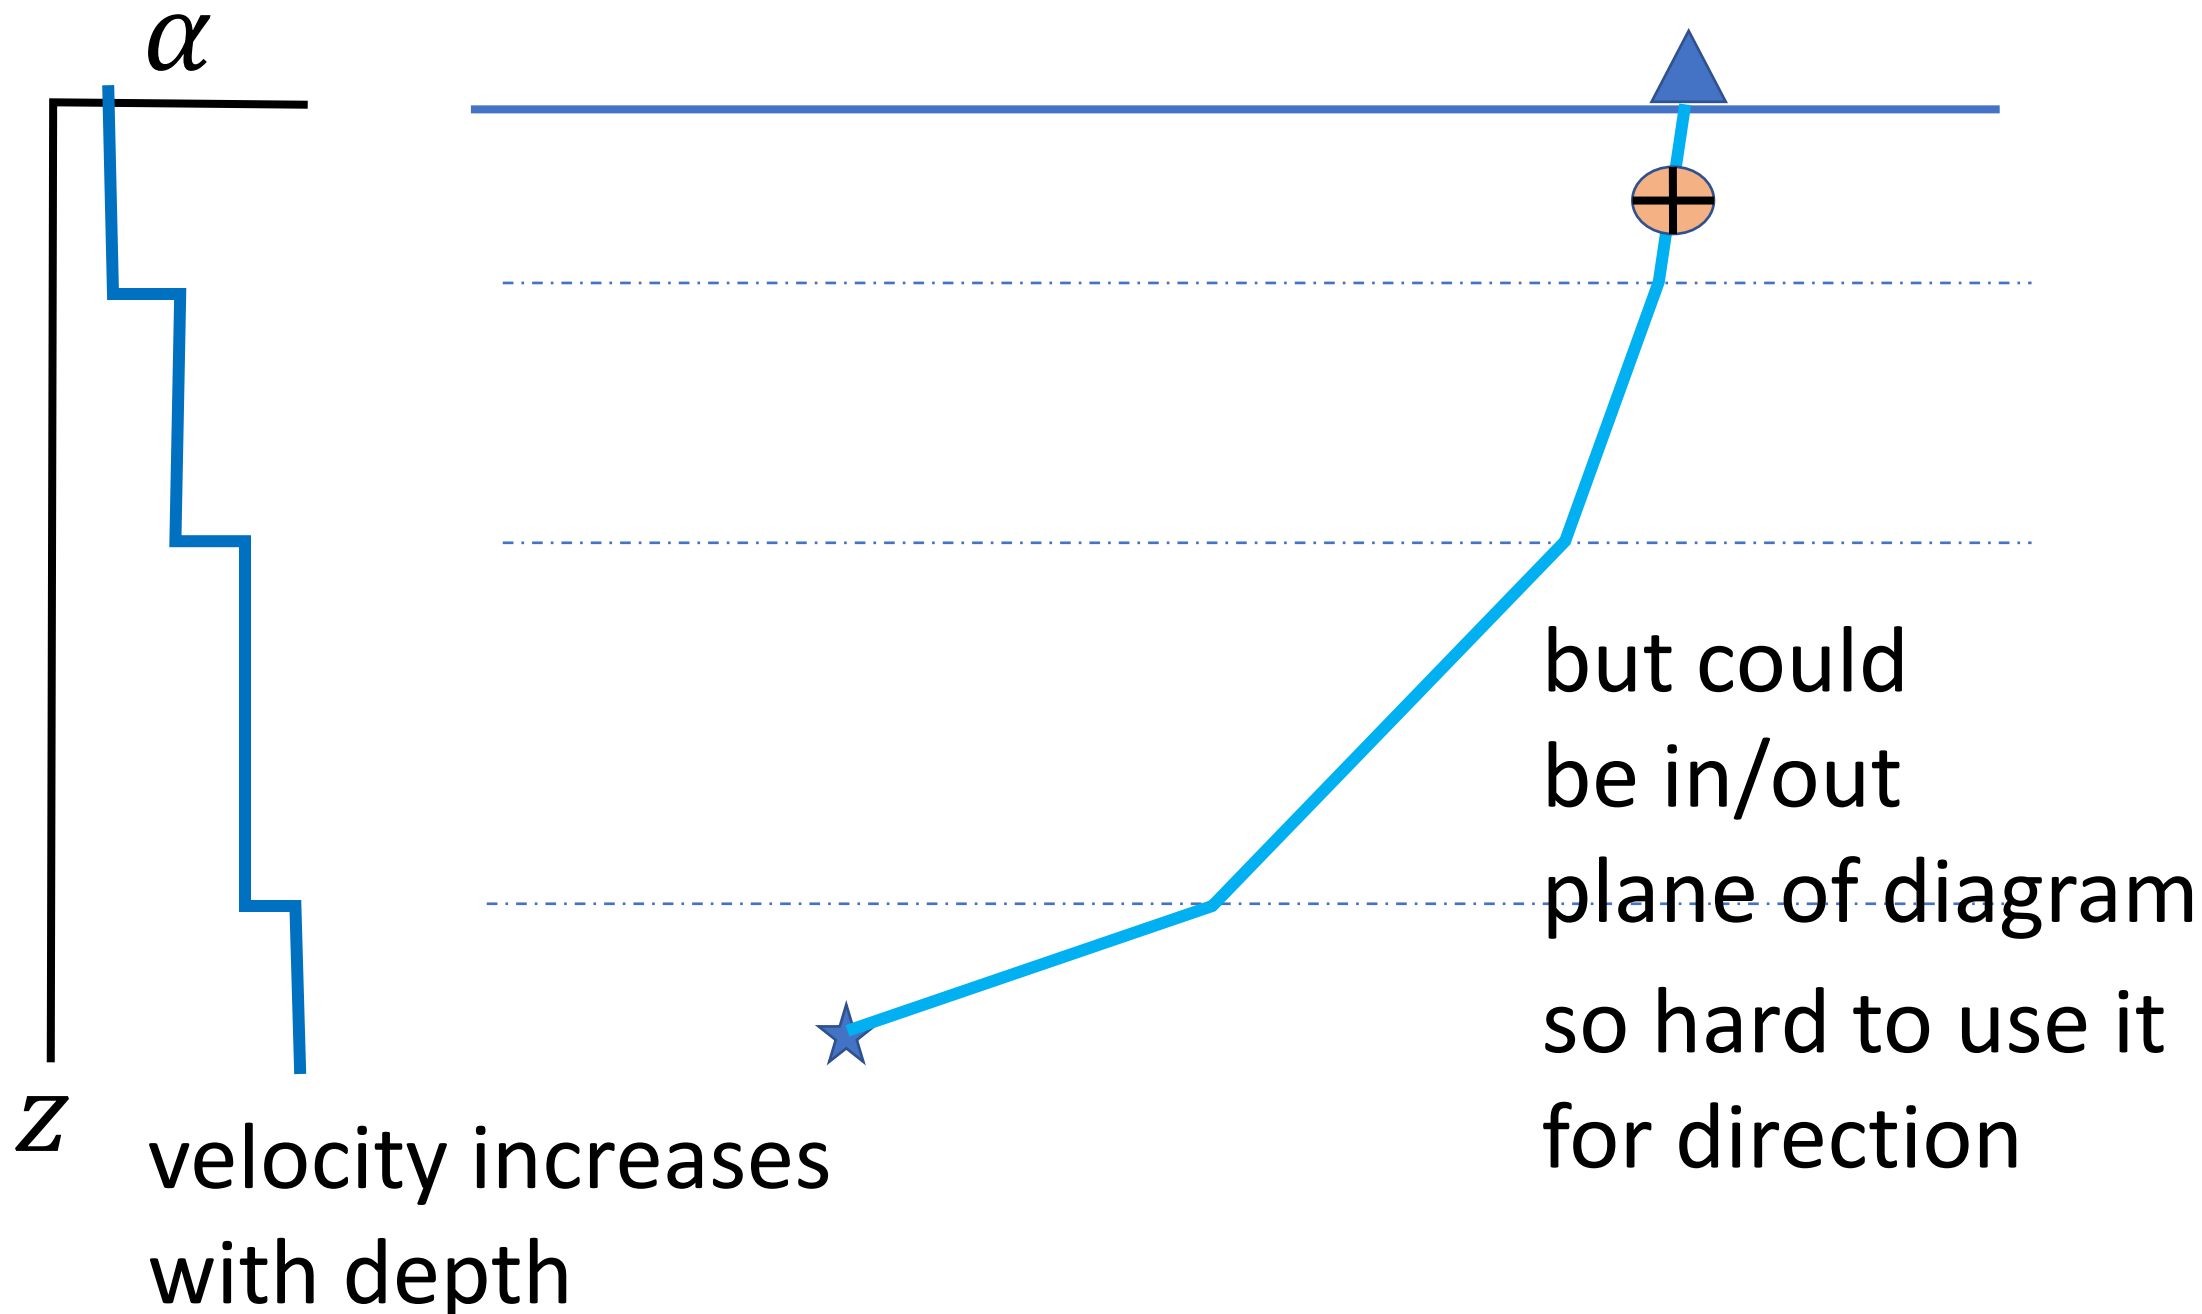

Shear wave

displacement perpendicular to propagation
“transversely-polarized”

S

after 22^h

Rule of thumb for Earth

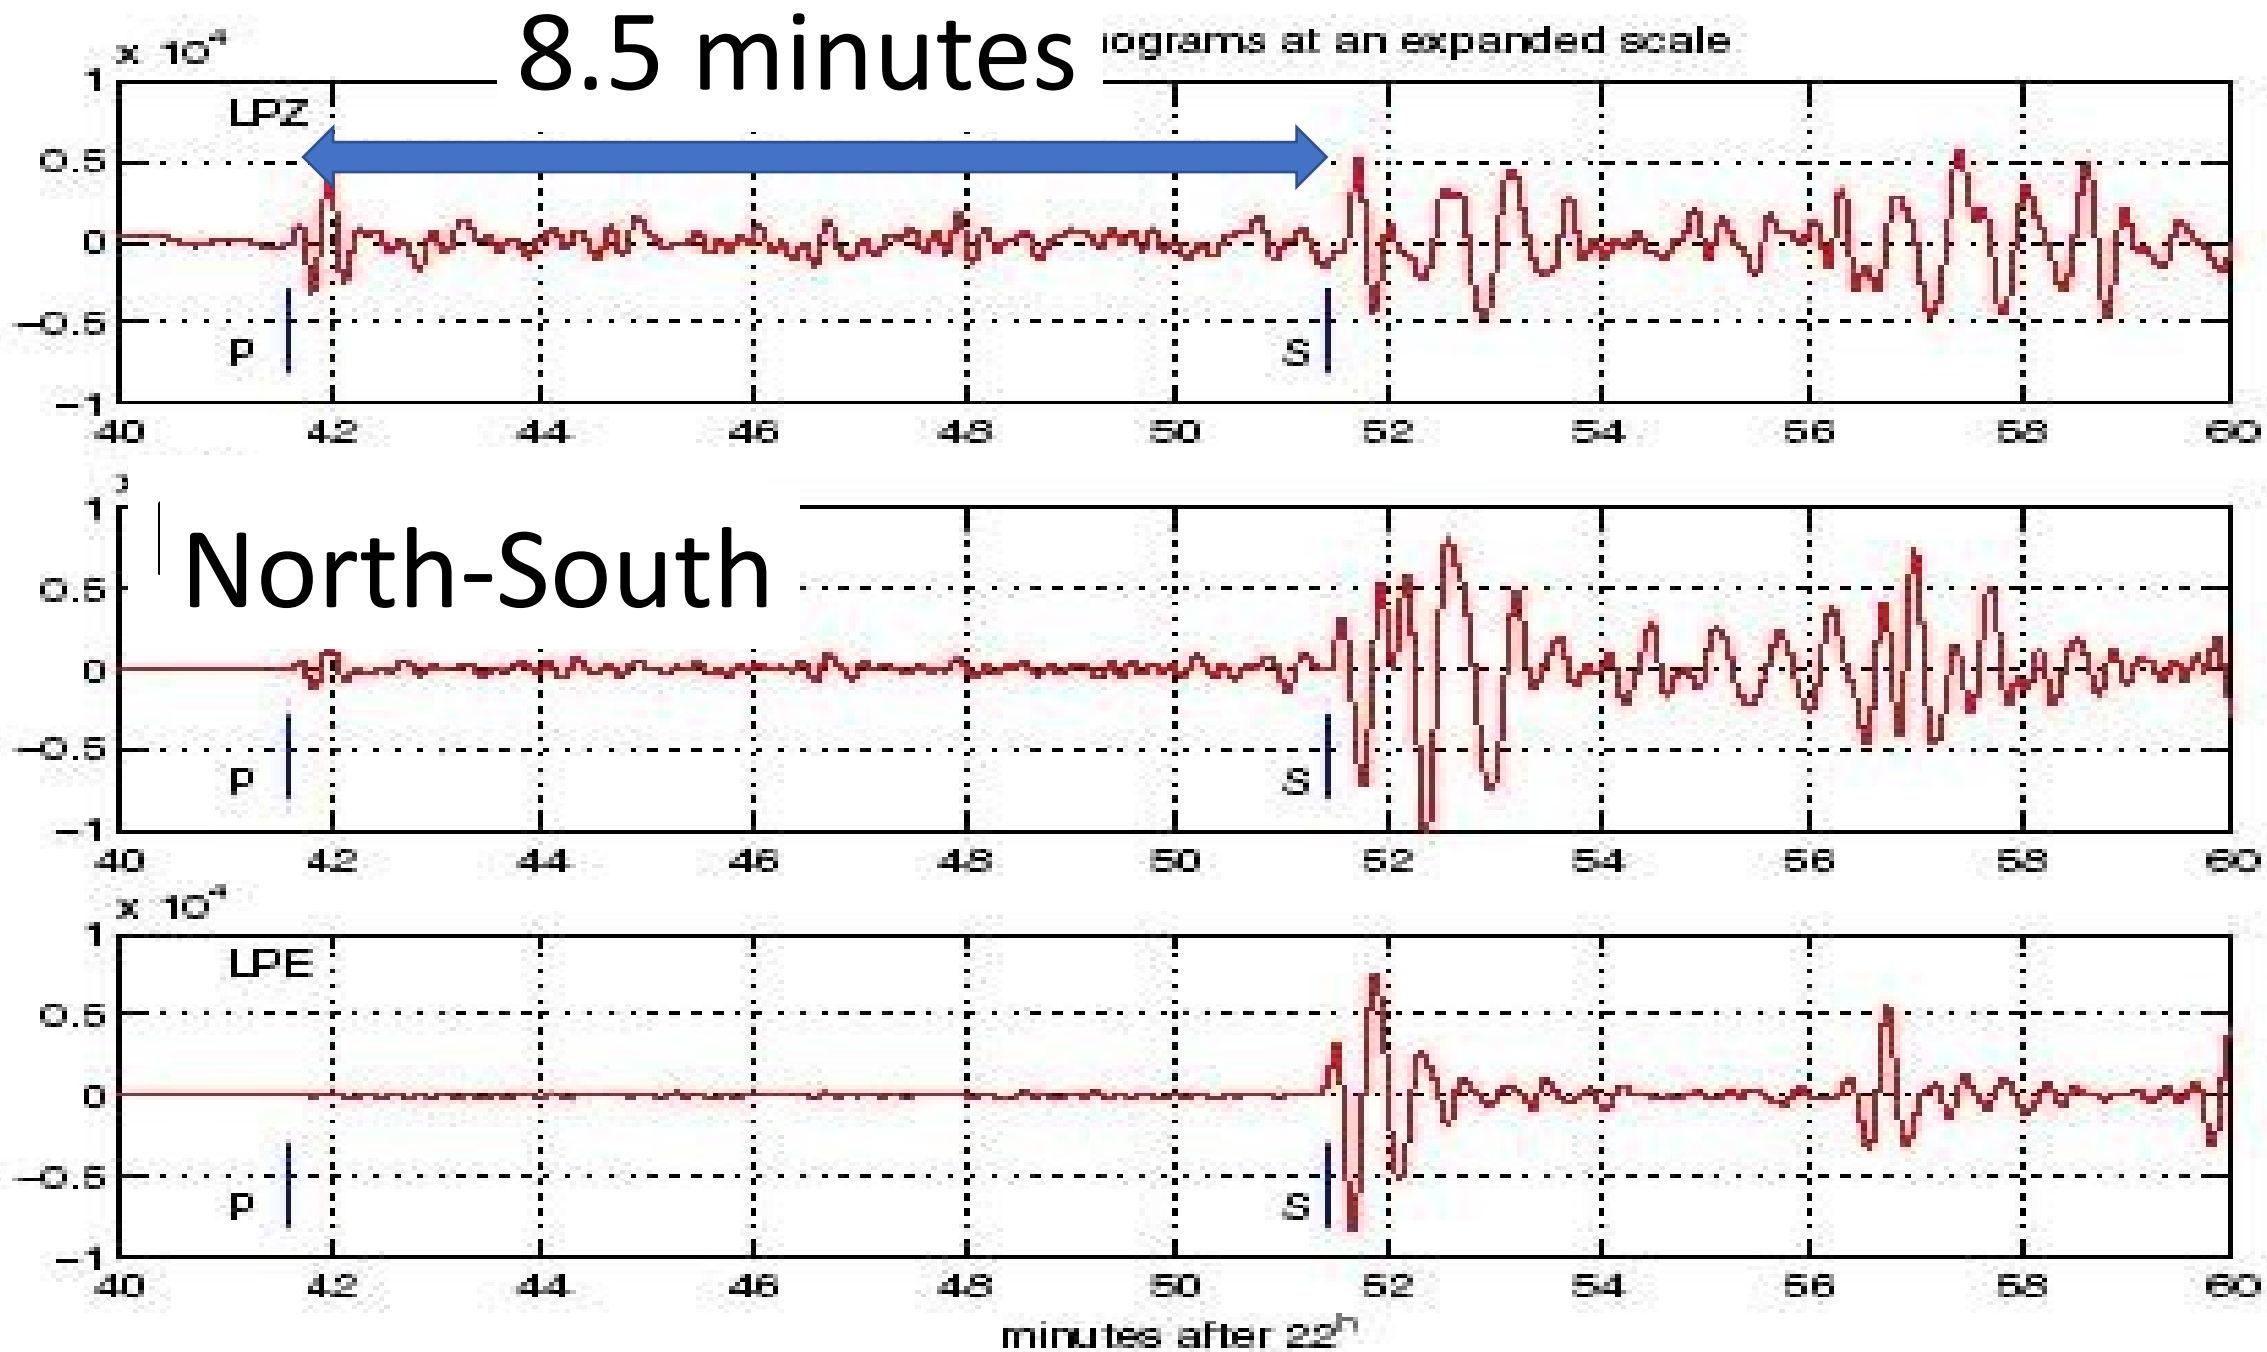

S minus P time in minutes

minus two

time ten

= distance in degrees

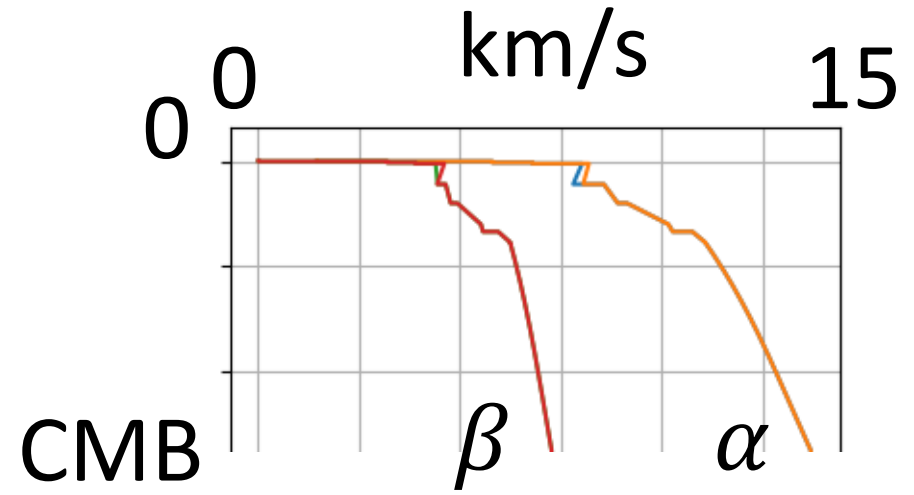

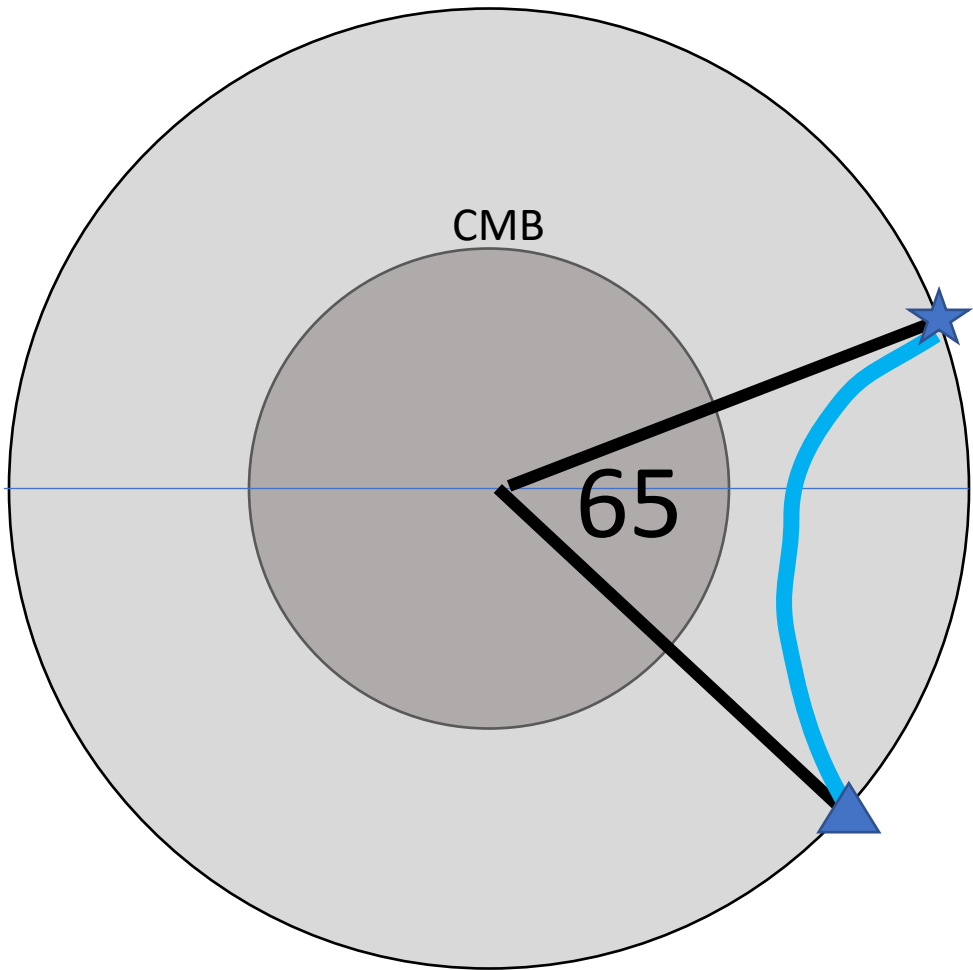

(1 deg = 111 km)

8.5 minutes = how many degrees?

minutes after 22^h

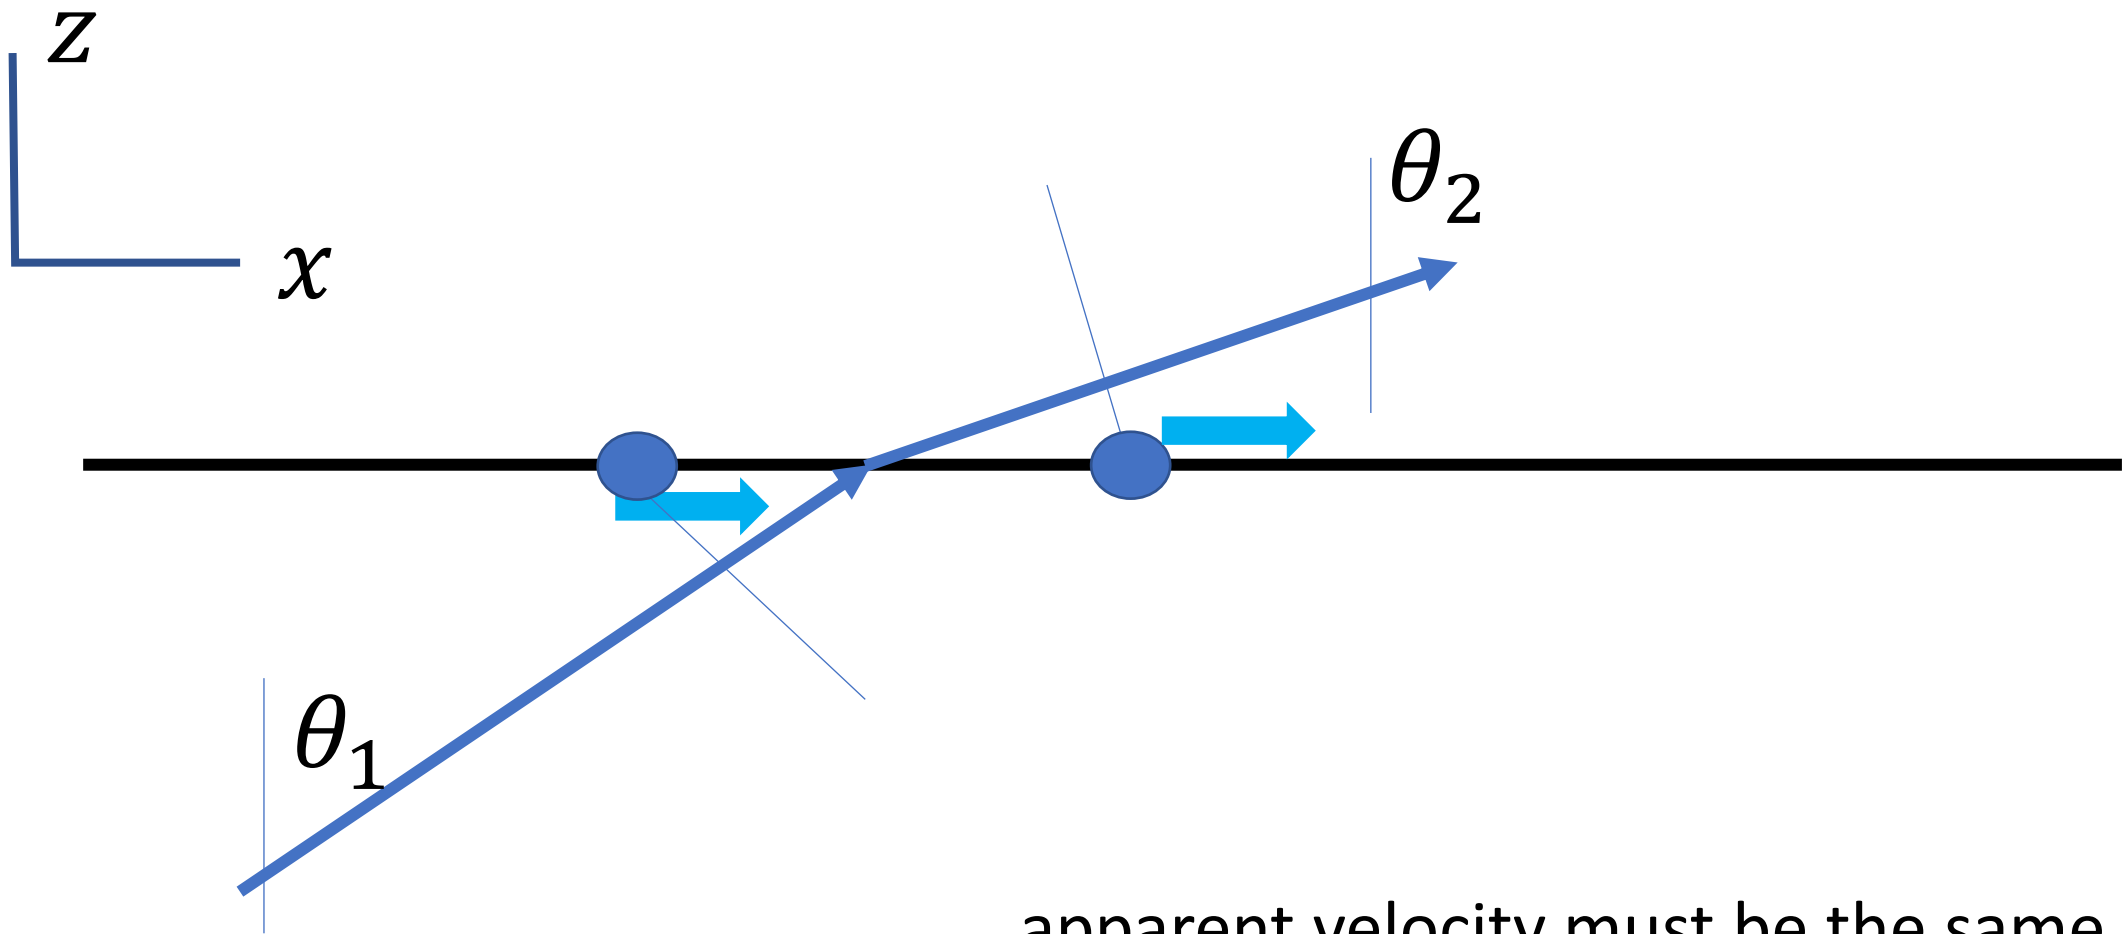

-43

△ -43

2. Reflected waves

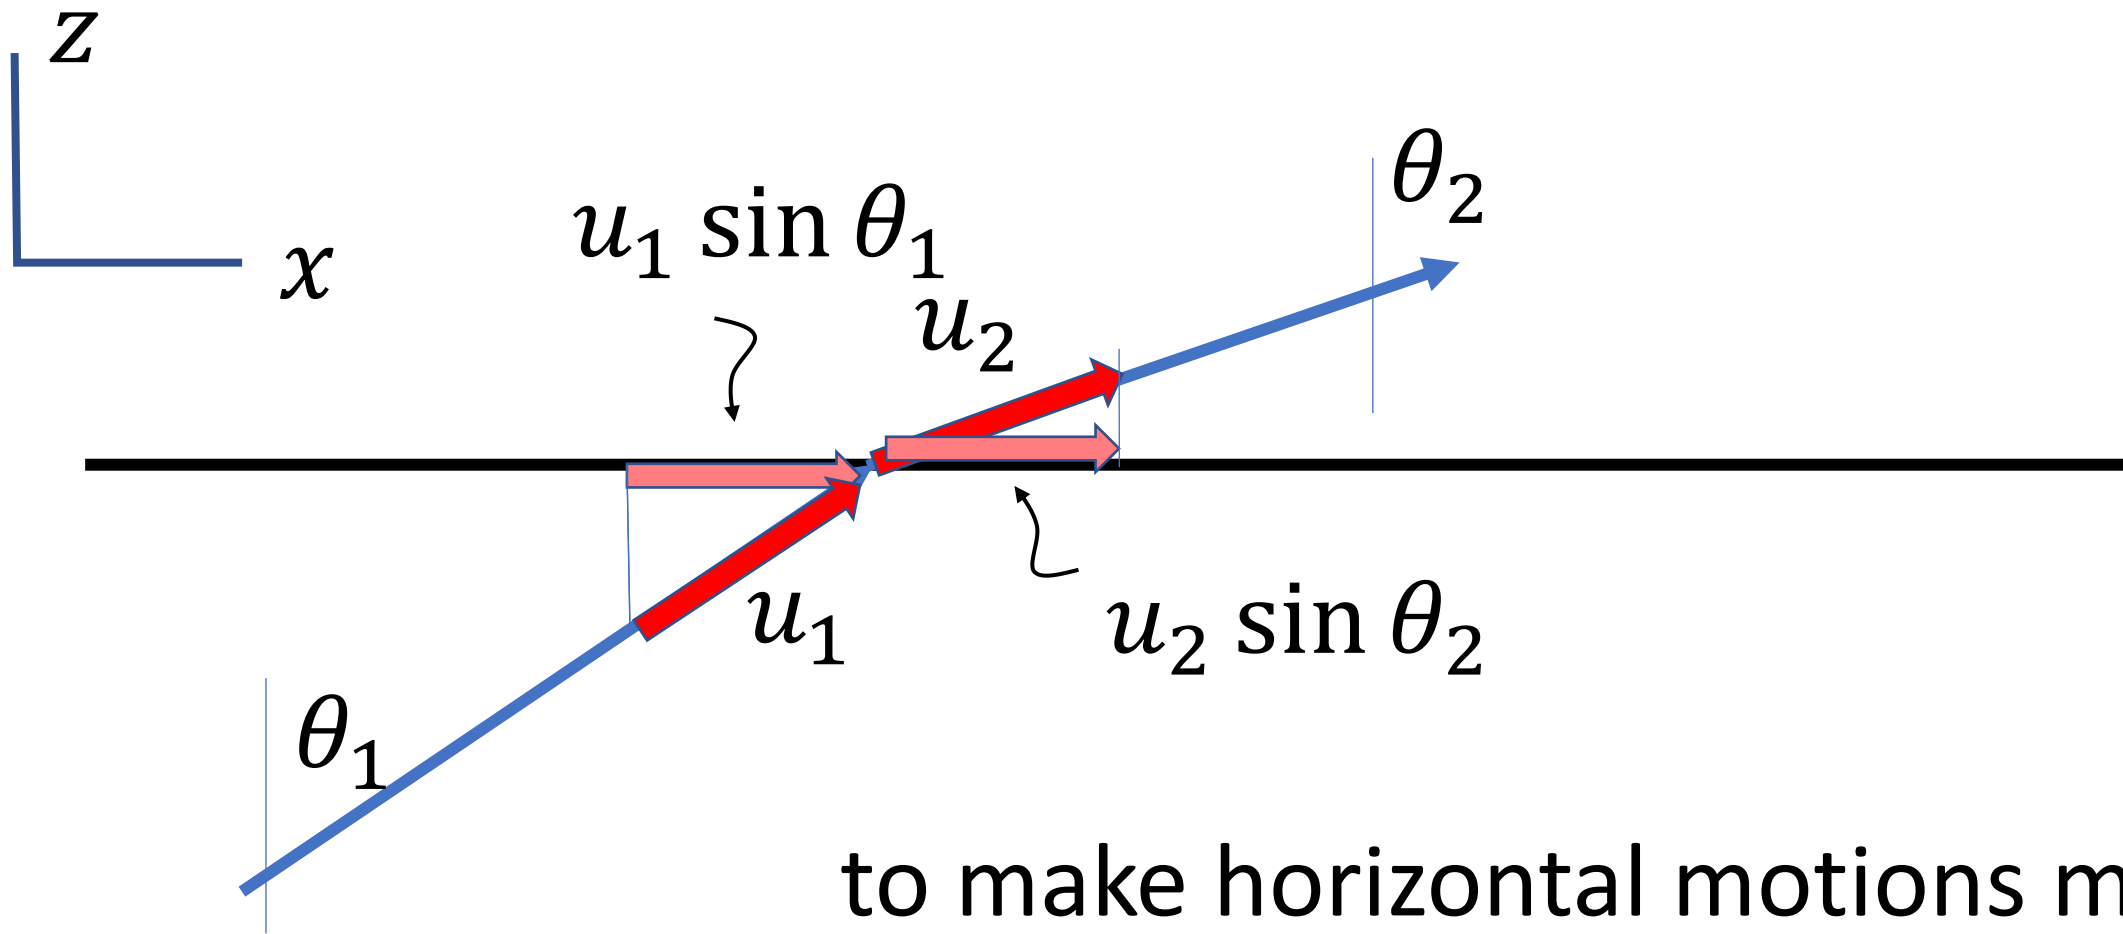

apparent velocity must be the same

implies Snell's law

$$\frac{\sin \theta_1}{\alpha_1} = \frac{\sin \theta_2}{\alpha_2}$$

to make horizontal motions match

$$u_1 \sin \theta_1 = u_2 \sin \theta_2$$

$$\text{so } u_1 \neq u_2$$

however if one adjusts u_2
so horizontal motions match ...
vertical motions won't match

$$u_2 \sin \theta_2 = u_1 \sin \theta_1$$

$$u_2 = u_1 \frac{\sin \theta_1}{\sin \theta_2} = u_1 \frac{\alpha_1}{\alpha_2} \quad \text{by Snell's law} \quad \frac{\sin \theta_1}{\alpha_1} = \frac{\sin \theta_2}{\alpha_2}$$

$$u_2 \cos \theta_2 = u_1 \cos \theta_1$$

$$u_1 \frac{\alpha_1}{\alpha_2} \cos \theta_2 \stackrel{?}{=} u_1 \cos \theta_1$$

$$\frac{\cos \theta_2}{\alpha_2} \stackrel{?}{=} \frac{\cos \theta_1}{\alpha_1}$$

$$\frac{\cos \theta_2}{\alpha_2} \stackrel{?}{=} \frac{\cos \theta_1}{\alpha_1}$$

$$\frac{\sqrt{1 - \sin^2 \theta_2}}{\alpha_2} \stackrel{?}{=} \frac{\sqrt{1 - \sin^2 \theta_1}}{\alpha_1}$$

$$\frac{1 - \sin^2 \theta_2}{\alpha_2^2} \stackrel{?}{=} \frac{1 - \sin^2 \theta_1}{\alpha_1^2}$$

$$\alpha_1^2 - \alpha_1^2 \sin^2 \theta_2 \stackrel{?}{=} \alpha_2^2 - \alpha_2^2 \sin^2 \theta_1$$

by Snell's law

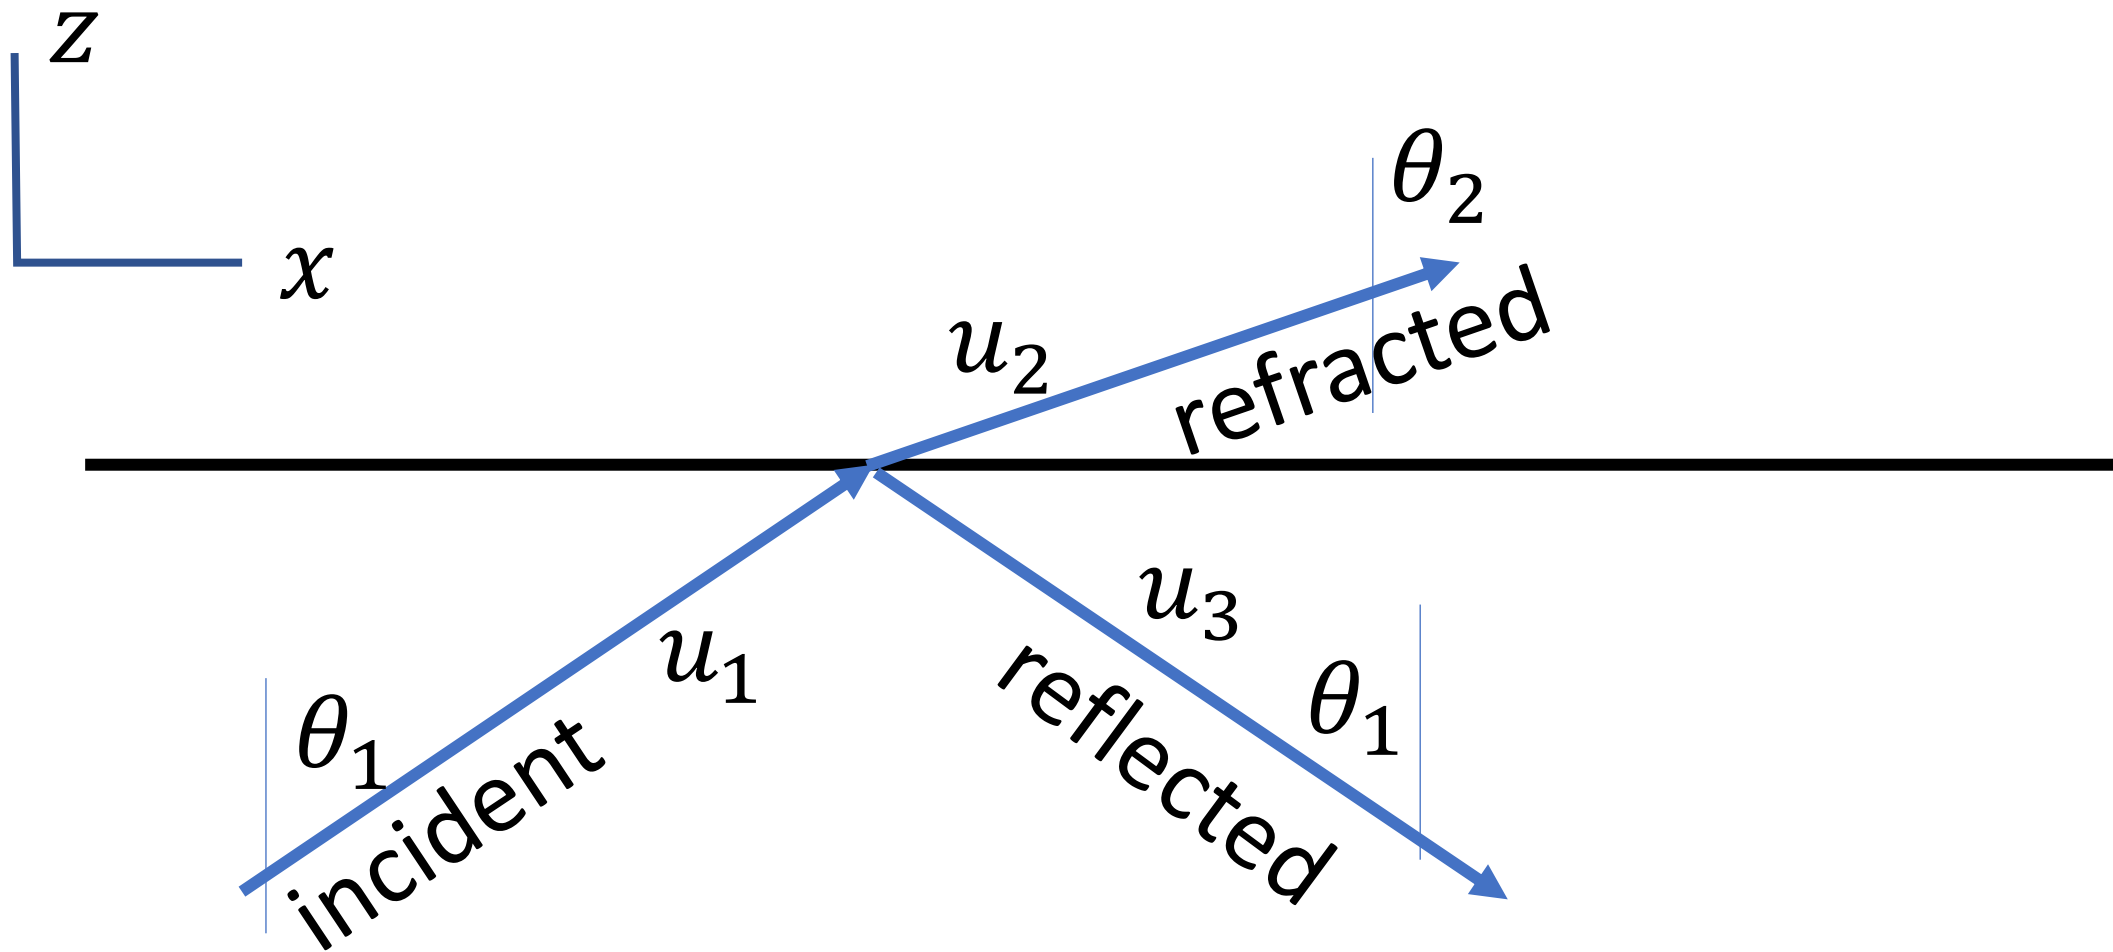

$$\frac{\sin \theta_1}{\alpha_1} = \frac{\sin \theta_2}{\alpha_2}$$

$$\alpha_2 \sin \theta_1 = \alpha_1 \sin \theta_2$$

$$\alpha_1^2 - \alpha_1^2 \cancel{\sin^2} \theta_2 \stackrel{?}{=} \alpha_2^2 - \alpha_2^2 \cancel{\sin^2} \theta_1$$

$$\alpha_1^2 \neq \alpha_2^2 \quad \text{Not equal}$$

To make them match, there must be a reflected wave

need a reflected wave
with angle θ_1

$$u_2 \sin \theta_2 = u_1 \sin \theta_1 + u_3 \sin \theta_1$$

$$u_2 \cos \theta_2 = u_1 \cos \theta_2 - u_3 \cos \theta_1$$

$$u_2 \sin \theta_2 - u_3 \sin \theta_1 = u_1 \sin \theta_1$$

$$u_2 \cos \theta_2 + u_3 \cos \theta_1 = u_1 \cos \theta_1$$

$$\begin{bmatrix} \sin \theta_2 & -\sin \theta_1 \\ \cos \theta_2 & \cos \theta_1 \end{bmatrix} \begin{bmatrix} u_2 \\ u_3 \end{bmatrix} = u_1 \begin{bmatrix} \sin \theta_1 \\ \cos \theta_1 \end{bmatrix}$$

$$\begin{bmatrix} u_2 \\ u_3 \end{bmatrix} = \frac{1}{D} \begin{bmatrix} \cos \theta_1 & \sin \theta_1 \\ -\cos \theta_2 & \sin \theta_2 \end{bmatrix} \begin{bmatrix} \sin \theta_1 \\ \cos \theta_1 \end{bmatrix} u_1$$

$$D = \sin \theta_2 \cos \theta_1 + \sin \theta_1 \cos \theta_2$$

$$\begin{bmatrix} u_2 \\ u_3 \end{bmatrix} = \frac{1}{D} \begin{bmatrix} 2\cos \theta_1 \sin \theta_1 \\ \sin \theta_2 \cos \theta_1 - -\cos \theta_2 \sin \theta_1 \end{bmatrix} u_1$$

$$u_3 = \frac{\sin \theta_2 \cos \theta_1 - \cos \theta_2 \sin \theta_1}{\sin \theta_2 \cos \theta_1 + \sin \theta_1 \cos \theta_2} u_1 =$$

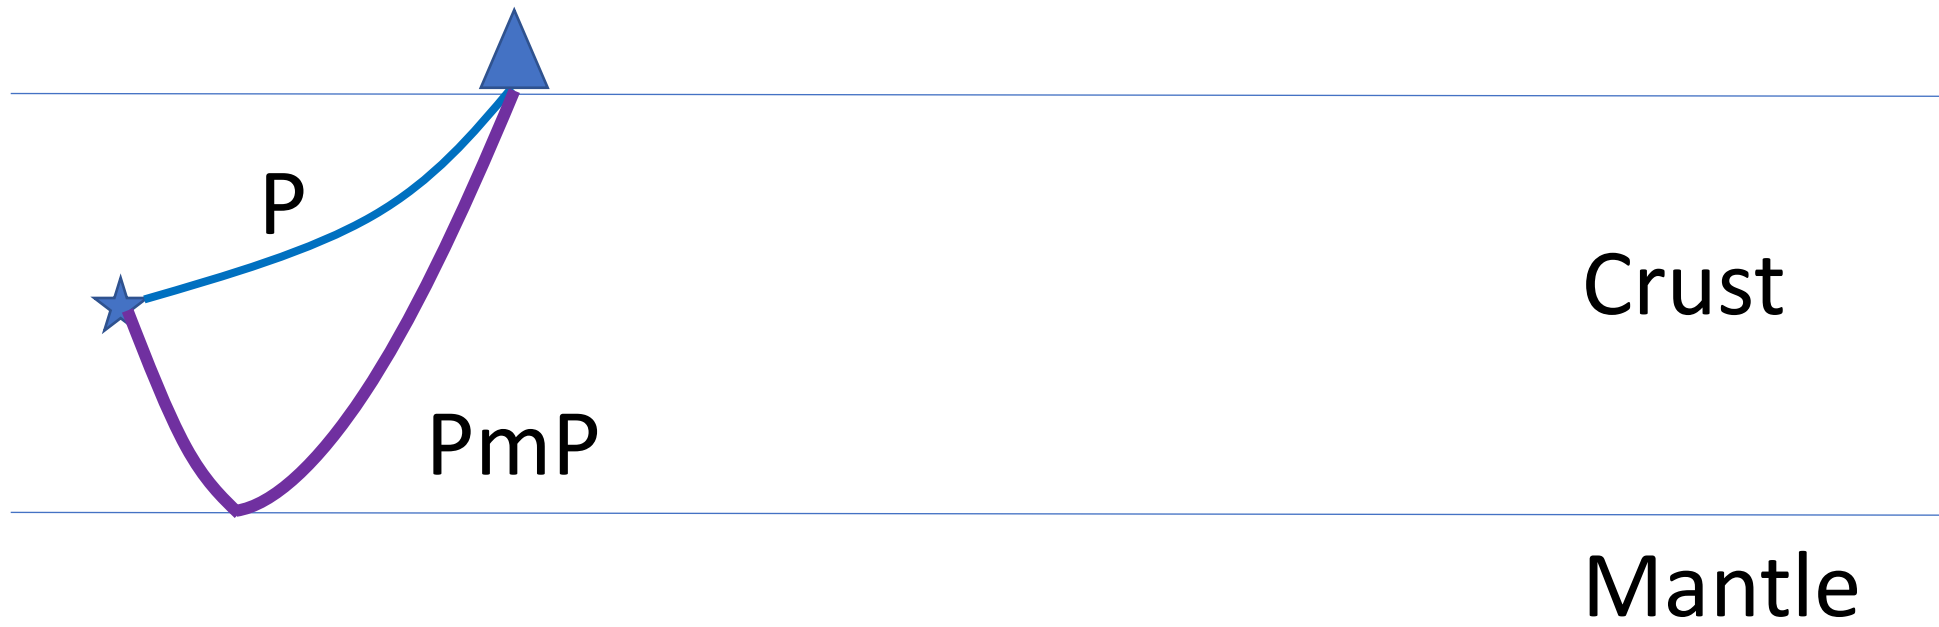

$$u_3 = \frac{+\sin \theta_2 \cos \theta_1 - \cos \theta_2 \sin \theta_1}{\sin \theta_2 \cos \theta_1 + \sin \theta_1 \cos \theta_2} u_1$$

$$u_3 = u_1 \frac{\frac{\sin \theta_2}{\sin \theta_1} \cos \theta_1 - \cos \theta_2}{\frac{\sin \theta_2}{\sin \theta_1} \cos \theta_1 + \cos \theta_2} u_1$$

$$u_3 = \frac{\frac{\alpha_2}{\alpha_1} \cos \theta_1 - \cos \theta_2}{\frac{\alpha_2}{\alpha_1} \cos \theta_1 + \cos \theta_2} u_1$$
