

# **Myths & Methods in Modeling**

Marc Spiegelman  
LDEO, Columbia University

January 20, 2004

# Contents

<b>1</b>	<b>Conservation Equations</b>	<b>1</b>
1.1	Conservation of anything . . . . .	1
1.2	General conservation of mass, energy and momentum . . . . .	3
1.3	Constitutive relations and approximations . . . . .	5
1.4	Scaling and “dimensional analysis” . . . . .	6
1.5	Summary . . . . .	11
	Bibliography . . . . .	11
<b>2</b>	<b>Some Real(?) Problems in Earth Science</b>	<b>13</b>
2.1	Introduction . . . . .	13
2.2	Thermal Convection . . . . .	13
2.2.1	Derivation . . . . .	14
2.2.2	Scaling . . . . .	15
2.2.3	Some solutions and a bit of physics . . . . .	16
2.2.4	Another approach to convection: the Lorenz Equations and chaos . . . . .	18
2.3	Shallow water equations . . . . .	19
2.3.1	Linearized Shallow water equations for the equatorial $\beta$ plane	20
2.3.2	El Niño prediction the Cane/Zebiak way . . . . .	21
2.4	Seismic Wave propagation . . . . .	22
2.4.1	Basic derivation: linear elastic media . . . . .	23
2.5	Flow in porous media . . . . .	24
2.5.1	Rigid porous media . . . . .	24
2.5.2	Deformable porous media: magma migration . . . . .	27
2.6	Geochemical Transport/Reactive flows . . . . .	30
	Bibliography . . . . .	32
<b>3</b>	<b>...and how to solve them: A survey of techniques</b>	<b>35</b>
<b>4</b>	<b>Solution of ordinary Differential Equations</b>	<b>43</b>
4.1	What they are and where they come from . . . . .	43
4.2	Basic Stepping concepts and algorithms . . . . .	46
4.3	Getting clever: adaptive stepping . . . . .	48
4.4	Beyond Runge-Kutta: Bulirsch-Stoer methods . . . . .	50
4.5	Even more ODE’s: stiff equations . . . . .	51

<b>5</b>	<b>Transport: Non-diffusive, flux conservative initial value problems and how to solve them</b>	<b>53</b>
5.1	Introduction . . . . .	53
5.2	Non-diffusive initial value problems and the material derivative . .	54
5.3	Grid based methods and simple finite differences . . . . .	55
5.3.1	Another approach to differencing: polynomial interpolation	57
5.3.2	Putting it all together . . . . .	59
5.4	Understanding differencing schemes: stability analysis . . . . .	60
5.4.1	Hirt's method . . . . .	61
5.4.2	Von Neumann's method . . . . .	62
5.5	Usable Eulerian schemes for non-diffusive IVP's . . . . .	63
5.5.1	Staggered Leapfrog . . . . .	63
5.5.2	A digression: differencing by the finite volume approach .	65
5.5.3	Upwind Differencing (Donor Cell) . . . . .	67
5.5.4	Improved Upwind schemes: mpdata . . . . .	68
5.6	Semi-Lagrangian schemes . . . . .	70
5.6.1	Adding source terms . . . . .	77
5.7	Pseudo-spectral schemes . . . . .	78
5.7.1	Time Stepping . . . . .	80
5.8	Summary . . . . .	82
	Bibliography . . . . .	83
<b>6</b>	<b>Diffusion: Diffusive initial value problems and how to solve them</b>	<b>85</b>
6.1	Basic physics of diffusion . . . . .	85
6.2	The numerics of diffusion . . . . .	86
6.2.1	Boundary conditions . . . . .	88
6.3	Implicit Schemes and stability . . . . .	90
6.3.1	An analogy with radioactive decay . . . . .	90
6.3.2	Fully implicit schemes . . . . .	91
6.3.3	Crank-Nicholson schemes . . . . .	92
6.3.4	Boundary conditions for implicit schemes . . . . .	93
6.4	Non-constant diffusivity . . . . .	94
6.5	Summary . . . . .	94
	Bibliography . . . . .	95
<b>7</b>	<b>Combos: Advection-Diffusion and operator splitting</b>	<b>97</b>
7.1	A smorgasbord of techniques . . . . .	98
7.1.1	Explicit FTCS . . . . .	98
7.1.2	Generalized Crank-Nicholson . . . . .	99
7.1.3	Operator Splitting, MPDATA/Semi-Lagrangian schemes+ Crank Nicholson . . . . .	100
7.1.4	A caveat on operator splitting (and other numerical schemes)	103
7.2	Another approach: Semi-Lagrangian Crank-Nicholson schemes .	103

<b>8</b>	<b>Initial Value problems in multiple dimensions</b>	<b>111</b>
8.1	Introduction . . . . .	111
8.2	Practical Matters: Storage, IO and visualization in multiple dimensions . . . . .	111
8.3	Spatial Differencing in 2-D . . . . .	115
8.3.1	Boundary conditions . . . . .	117
8.4	Advection schemes in 2-D . . . . .	120
8.4.1	Staggered-Leapfrog - non-conservative form . . . . .	121
8.4.2	Staggered-Leapfrog - conservative form . . . . .	121
8.4.3	2-D Upwind and MPDATA . . . . .	122
8.4.4	Semi-Lagrangian Schemes . . . . .	123
8.4.5	Pseudo-spectral schemes . . . . .	123
8.4.6	Some example tests-2-D . . . . .	124
8.4.7	Other approaches- particle based fully-Lagrangian schemes . . . . .	127
8.5	Diffusion schemes in 2-D . . . . .	129
8.5.1	Explicit FTCS . . . . .	131
8.5.2	ADI: Alternating-Direction Implicit Schemes . . . . .	132
8.5.3	Some diffusion examples 2-D . . . . .	133
8.6	Combined Advection-Diffusion and operator splitting . . . . .	134
	Bibliography . . . . .	138
<b>9</b>	<b>Boundary Value problems</b>	<b>139</b>
9.1	Where BVP's come from: basic physics . . . . .	139
9.2	Discretization . . . . .	141
9.3	Direct Methods . . . . .	143
9.3.1	Boundary conditions . . . . .	144
9.4	Rapid Methods . . . . .	146
9.4.1	Fourier Transform Solutions . . . . .	146
9.4.2	Cyclic Reduction Solvers . . . . .	148
9.5	Iterative Methods . . . . .	152
9.5.1	Classical Methods: Jacobi, Gauss-Seidel and SOR . . . . .	154
9.5.2	Multigrid Methods . . . . .	157
9.5.3	Practical computation issues: how to actually do it . . . . .	163
9.5.4	A note on Boundary conditions in multi-grid . . . . .	167
9.6	Krylov Subspace Schemes . . . . .	170
9.7	Summary and timing results . . . . .	171
	Bibliography . . . . .	173
<b>10</b>	<b>High Performanc computing and parallel programming</b>	<b>175</b>
10.1	Hardcore computing and the big Iron . . . . .	175
10.2	Styles of Parallelism . . . . .	175
10.3	Parallel programming on the IBM SP2: using MPI . . . . .	175
<b>A</b>	<b>Vector Calculus: a quick review</b>	<b>1</b>
A.1	Basic concepts . . . . .	1
A.2	Partial derivatives and vector operators . . . . .	3

<b>B</b>	<b>Using the Suns at Lamont</b>	<b>7</b>
B.1	Getting started: Logging in . . . . .	7
B.2	Basic Unix Concepts and Commands . . . . .	9
B.3	Additional commands and programs . . . . .	13
B.4	Shortcuts and the csh . . . . .	14
B.5	A typical unix session: sort of old now . . . . .	16
<b>C</b>	<b>A Fortran Primer: (and cheat sheet)</b>	<b>19</b>
C.1	Basic Fortran Concepts and Commands . . . . .	19
C.2	A Few pointers to good coding . . . . .	26
C.3	A sample program . . . . .	26
C.4	A sample makefile . . . . .	28
