Answer the questions based on the table above:

- 1) Which species was caught in the most places (on the list) on October 5, 2023?
- 2) In the Hudson River Estuary, the water near the ocean is salty, while further upriver it is fresh. The leading edge of salty water is called the salt front. Atlantic silversides can be found pushing right up to the edge of the salt front. Based on the northernmost site listed here with Atlantic silversides, where would you estimate the location of the salt front on October 5th?
- 3) Based on the location of the salt front, which of the listed fish species are found mainly in saltwater?
- 4) Which species are found mainly in freshwater?
- 5) Which species is likely to be found throughout the whole estuary, in both fresh and salt water?
