Table of contents

Preface xiii
Advice on scripting for beginners xix

1 Data analysis with *MatLab*
1.1 Why *MatLab*? 1
1.2 Getting started with *MatLab* 3
1.3 Getting organized 3
1.4 Navigating folders 4
1.5 Simple arithmetic and algebra 5
1.6 Vectors and matrices 7
1.7 Multiplication of vectors of matrices 7
1.8 Element access 8
1.9 Representing functions 9
1.10 To loop or not to loop 11
1.11 The matrix inverse 13
1.12 Loading data from a file 13
1.13 Plotting data 14
1.14 Saving data to a file 16
1.15 Some advice on writing scripts 17
Problems 19

2 A first look at data
2.1 Look at your data! 21
2.2 More on *MatLab* graphics 28
2.3 Rate information 32
2.4 Scatter plots and their limitations 34
Crib Sheet 2.1 When first examining a dataset 37
Problems 38

3 Probability and what it has to do with data analysis
3.1 Random variables 39
3.2 Mean, median, and mode 41
3.3 Variance 45
3.4 Two important probability density functions 46
3.5 Functions of a random variable 48
3.6 Joint probabilities 50
3.7 Bayesian inference 52

Comp. by: pdjeapradaban Stage: Proof Chapter No.: TOC Title Name: Menke2
Date:14/12/15 Time:16:29:42 Page Number: 7

C2015-0-01993-1

3.8 Joint probability density functions 53
3.9 Covariance 56
3.10 Multivariate distributions 58
3.11 The multivariate Normal distributions 58
3.12 Linear functions of multivariate data 61
Crib Sheet 3.1 Variance and error propagation 64
Problems 65
References 65

4 The power of linear models
4.1 Quantitative models, data, and model parameters 67
4.2 The simplest of quantitative models 69
4.3 Curve fitting 70
4.4 Mixtures 73
4.5 Weighted averages 74
4.6 Examining error 77
4.7 Least squares 80
4.8 Examples 82
Crib Sheet 4.1 Standard error of the mean 86
Crib Sheet 4.2 Steps in simple least squares 86
4.9 Covariance and the behavior of error 88
Problems 89

5 Quantifying preconceptions
5.1 When least square fails 91
5.2 Prior information 92
5.3 Bayesian inference 94
5.4 The product of Normal probability density distributions 96
5.5 Generalized least squares 98
5.6 The role of the covariance of the data 100
5.7 Smoothness as prior information 102
Crib Sheet 5.1 Generalized least squares 104
5.8 Sparse matrices 105
5.9 Reorganizing grids of model parameters 107
Problems 111
References 112

6 Detecting periodicities
6.1 Describing sinusoidal oscillations 113
6.2 Models composed only of sinusoidal functions 115
6.3 Going complex 122
Crib Sheet 6.1 Experimental design for spectra 125
6.4 Lessons learned from the integral transform 125
6.5 Normal curve 126
6.6 Spikes 127

C2015-0-01993-1

6.7 Area under a function 128
6.8 Time-delayed function 129
6.9 Derivative of a function 130
6.10 Integral of a function 131
6.11 Convolution 132
Crib Sheet 6.2 Exemplary pairs of time series *d(t)* and its amplitude spectral density *s(f)* 133
6.12 Nontransient signals 134
Problems 137
References 137

7 The past influences the present
7.1 Behavior sensitive to past conditions 139
Crib Sheet 7.1 Filter basics 143
7.2 Filtering as convolution 144
7.3 Solving problems with filters 145
7.4 An example of an empirically-derived filter 152
7.5 Predicting the future 154
Crib Sheet 7.2 Least squares estimation of a filter 155
7.6 A parallel between filters and polynomials 157
7.7 Filter cascades and inverse filters 158
7.8 Making use of what you know 161
Problems 163
References 163

8 Patterns suggested by data
8.1 Samples as mixtures 165
8.2 Determining the minimum number of factors 167
8.3 Application to the Atlantic Rocks dataset 171
8.4 Spiky factors 172
8.5 Weighting of elements 176
Crib Sheet 8.1 Steps in factor analysis 177
8.6 Q-mode factor analysis and spatial clustering 178
8.7 Time-Variable functions 179
Problems 184
References 185

9 Detecting correlations among data
9.1 Correlation is covariance 187
9.2 Computing autocorrelation by hand 193
9.3 Relationship to convolution and power spectral density 193
9.4 Cross-correlation 194
9.5 Using the cross-correlation to align time series 196
9.6 Least squares estimation of filters 198
9.7 The effect of smoothing on time series 200

Comp. by: pdjeapradaban Stage: Proof Chapter No.: TOC Title Name: Menke2

C2015-0-01993-1

9.8 Band-pass filters 204
9.9 Frequency-dependent coherence 208
9.10 Windowing before computing Fourier transforms 215
9.11 Optimal window functions 217
Problems 221
References 221

10 Filling in missing data
10.1 Interpolation requires prior information 223
10.2 Linear interpolation 225
10.3 Cubic interpolation 226
10.4 Kriging 228
Crib Sheet 10.1 When and how to interpolate 230
10.5 Interpolation in two-dimensions 232
10.6 Fourier transforms in two dimensions 234
Problems 236
References 237

11 "Approximate" is not a pejorative word
11.1 The value of approximation 239
11.2 Polynomial approximations and Taylor series 240
11.3 Small number approximations 242
Crib Sheet 11.1 Small number approximations 242
11.4 Small number approximation applied to distance on a sphere 243
11.5 Small number approximation applied to variance 243
11.6 Taylor series in multiple dimensions 245
11.7 Small number approximation applied to covariance 246
11.8 Solving nonlinear problems with iterative least squares 247
Crib Sheet 11.2 Iterative generalized least squares 248
11.9 Fitting a sinusoid of unknown frequency 249
11.10 The gradient method 250
11.11 Precomputation of a function and table lookups 253
11.12 Artificial neural networks 254
11.13 Information flow in a neural net 256
11.14 Training a neural net 260
11.15 Neural net for a nonlinear response 263
Problems 267
References 267

12 Are my results significant?
12.1 The difference is due to random variation! 269
12.2 The distribution of the total error 270
12.3 Four important probability density functions 272
12.4 A hypothesis testing scenario 274
12.5 Chi-squared test for generalized least squares 280

C2015-0-01993-1

Crib Sheet 12.1 Steps in generalized least squares 281
12.6 Testing improvement in fit 283
12.7 Testing the significance of a spectral peak 284
Crib Sheet 12.2 Computing power spectral density 289
12.8 Bootstrap confidence intervals 290
Problems 293

13 Notes
Note 1.1 On the persistence of *MatLab* variables 295
Note 2.1 On time 296
Note 2.2 On reading complicated text files 297
Note 3.1 On the rule for error propagation 298
Note 3.2 On the `eda_draw()` function 298
Note 4.1 On complex least squares 299
Note 5.1 On the derivation of generalized least squares 301
Note 5.2 On *MatLab* functions 301
Note 5.3 On reorganizing matrices 302
Note 6.1 On the *MatLab* `atan2()` function 302
Note 6.2 On the orthonormality of the discrete Fourier data kernel 302
Note 6.3 On the expansion of a function in an orthonormal basis 303
Note 8.1 On singular value decomposition 305
Note 9.1 On coherence 306
Note 9.2 On Lagrange multipliers 306
Note 11.1 On the chain rule for partial derivatives 307
References 308
