These proofs may contain colour figures. Those figures may print black and white in the final printed book if a colour print product has not been planned. The colour figures will appear in colour in all electronic versions of this book.

Contents

Preface ix
Introduction xi

1. Describing Inverse Problems

1.1 Formulating Inverse Problems 1
1.2 The Linear Inverse Problem 3
1.3 Examples of Formulating Inverse Problems 4
1.4 Solutions to Inverse Problems 12
1.5 Problems 15
References 15
Further Reading 15

2. Some Comments on Probability Theory

2.1 Noise and Random Variables 17
2.2 Correlated Data 21
2.3 Functions of Random Variables 23
2.4 Gaussian Probability Density Functions 27
2.5 Testing the Assumption of Gaussian Statistics 30
2.6 Conditional Probability Density Functions 32
2.7 Confidence Intervals 34
2.8 Computing Realizations of Random Variables 35
2.9 Problems 37
Reference 37

3. Solution of the Linear, Gaussian Inverse Problem, Viewpoint 1: The Length Method

3.1 The Lengths of Estimates 40
3.2 Measures of Length 40
3.3 Least Squares for a Straight Line 43
3.4 The Least Squares Solution of the Linear Inverse Problem 44
3.5 Some Examples 46
3.6 The Existence of the Least Squares Solution 52
3.7 The Purely Underdetermined Problem 54
3.8 Mixed-Determined Problems 55
3.9 Weighted Measures of Length as a Type of Prior Information 57
3.10 Other Types of Prior Information 62
3.11 The Variance of the Model Parameter Estimates 64
3.12 Variance and Prediction Error of the Least Squares Solution 66
3.13 Problems 68
References 69

4. Solution of the Linear, Gaussian Inverse Problem, Viewpoint 2: Generalized Inverses

4.1 Solutions Versus Operators 72
4.2 The Data Resolution Matrix 72
4.3 The Model Resolution Matrix 74
4.4 The Unit Covariance Matrix 75
4.5 Resolution and Covariance of Some Generalized Inverses 76
4.6 Measures of Goodness of Resolution and Covariance 77
4.7 Generalized Inverses With Good Resolution and Covariance 78
4.8 Sidelobes and the Backus-Gilbert Spread Function 80
4.9 The Backus-Gilbert Generalized Inverse for the Underdetermined Problem 81
4.10 Including the Covariance Size 84
4.11 The Trade-Off of Resolution and Variance 85
4.12 Checkerboard Tests 87
4.13 Problems 89
References 89

5. Solution of the Linear, Gaussian Inverse Problem, Viewpoint 3: Maximum Likelihood Methods

5.1 The Mean of a Group of Measurements 92
5.2 Maximum Likelihood Applied to Inverse Problem 94

Menke, 978-0-12-813555-6

To protect the rights of the author(s) and publisher we inform you that this PDF is an uncorrected proof for internal business use only by the author(s), editor(s), reviewer(s), Elsevier and typesetter SPi. It is not allowed to publish this proof online or in print. This proof copy is the copyright property of the publisher and is confidential until formal publication.

These proofs may contain colour figures. Those figures may print black and white in the final printed book if a colour print product has not been planned. The colour figures will appear in colour in all electronic versions of this book.

5.3 Model Resolution in the Presence of Prior Information 109
5.4 Relative Entropy as a Guiding Principle 111
5.5 Equivalence of the Three Viewpoints 112
5.6 Chi-Square Test for the Compatibility of the Prior and Posterior Error 113
5.7 The *F*-test of the Error Improvement Significance 116
5.8 Problems 118
References 119

6. Nonuniqueness and Localized Averages

6.1 Null Vectors and Nonuniqueness 121
6.2 Null Vectors of a Simple Inverse Problem 122
6.3 Localized Averages of Model Parameters 123
6.4 Relationship to the Resolution Matrix 124
6.5 Averages Versus Estimates 124
6.6 Nonunique Averaging Vectors and Prior Information 125
6.7 End-Member Solutions and Squeezing 127
6.8 Problems 129
References 130

7. Applications of Vector Spaces

7.1 Model and Data Spaces 131
7.2 Householder Transformations 132
7.3 Designing Householder Transformations 136
7.4 Transformations That Do Not Preserve Length 137
7.5 The Solution of the Mixed-Determined Problem 138
7.6 Singular-Value Decomposition and the Natural Generalized Inverse 139
7.7 Derivation of the Singular-Value Decomposition 145
7.8 Simplifying Linear Equality and Inequality Constraints 146
7.9 Inequality Constraints 147
7.10 Problems 153
References 154

8. Linear Inverse Problems and Non-Gaussian Statistics

8.1 L_1 Norms and Exponential Probability Density Functions 155
8.2 Maximum Likelihood Estimate of the Mean of an Exponential Probability Density Function 157
8.3 The General Linear Problem 159
8.4 Solving L_1 Norm Problems by Transformation to a Linear Programming Problem 160
8.5 Solving L_1 Norm Problems by Reweighted L_2 Minimization 163
8.6 The L_∞ Norm 166
8.7 The L_0 Norm and Sparsity 169
8.8 Problems 172
References 173

9. Nonlinear Inverse Problems

9.1 Parameterizations 175
9.2 Linearizing Transformations 177
9.3 Error and Likelihood in Nonlinear Inverse Problems 178
9.4 The Grid Search 180
9.5 The Monte Carlo Search 183
9.6 Newton's Method 183
9.7 The Implicit Nonlinear Inverse Problem With Gaussian Data 187
9.8 Gradient Method 192
9.9 Simulated Annealing 194
9.10 The Genetic Algorithm 196
9.11 Choosing the Null Distribution for Inexact Non-Gaussian Nonlinear Theories 202
9.12 Bootstrap Confidence Intervals 203
9.13 Problems 204
References 205

10. Factor Analysis

10.1 The Factor Analysis Problem 207
10.2 Normalization and Physicality Constraints 212
10.3 Q-Mode and R-Mode Factor Analysis 216
10.4 Empirical Orthogonal Function Analysis 217
10.5 Problems 220
References 222

11. Continuous Inverse Theory and Tomography

11.1 The Backus-Gilbert Inverse Problem 223
11.2 Resolution and Variance Trade-Off 225
11.3 Approximating Continuous Inverse Problems as Discrete Problems 226
11.4 Tomography and Continuous Inverse Theory 227
11.5 Tomography and the Radon Transform 228
11.6 The Fourier Slice Theorem 229

11.7 Correspondence Between Matrices and Linear Operators 231
11.8 The Fréchet Derivative 234
11.9 The Fréchet Derivative of Error 234
11.10 Backprojection 235
11.11 Fréchet Derivatives Involving a Differential Equation 238
11.12 Derivative With Respect to a Parameter in a Differential Equation 242
11.13 Problems 247
References 248

12. Sample Inverse Problems

12.1 An Image Enhancement Problem 249
12.2 Digital Filter Design 252
12.3 Adjustment of Crossover Errors 255
12.4 An Acoustic Tomography Problem 258
12.5 One-Dimensional Temperature Distribution 259
12.6 L_1, L_2, and L_∞ Fitting of a Straight Line 263
12.7 Finding the Mean of a Set of Unit Vectors 264
12.8 Gaussian and Lorentzian Curve Fitting 267
12.9 Earthquake Location 270
12.10 Vibrational Problems 273
12.11 Problems 276
References 276

13. Applications of Inverse Theory to Solid Earth Geophysics

13.1 Earthquake Location and Determination of the Velocity Structure of the Earth From Travel Time Data 277
13.2 Moment Tensors of Earthquakes 280
13.3 Adjoint Methods in Seismic Imaging 281
13.4 Wavefield Tomography 285
13.5 Finite-Frequency Travel Time Tomography 287
13.6 Banana-Doughnut Kernels 290
13.7 Seismic Migration 292
13.8 Velocity Structure From Free Oscillations and Seismic Surface Waves 293
13.9 Seismic Attenuation 295
13.10 Signal Correlation 295
13.11 Tectonic Plate Motions 296
13.12 Gravity and Geomagnetism 296
13.13 Electromagnetic Induction and the Magnetotelluric Method 298
13.14 Problems 298
References 298
Further Reading 300
