

Teleseismic and regional seismicity in 1997-98

cross - $M_b > 4$ "local"
diamond - $6 > M_b > 5$ "regional"

$M_b > 6.0$

Figure 3. (TOP) A map of existing permanent seismic observatories in northeastern North America and on Bermuda (inverted triangles), and a tentative schematic of the proposed deployment (circles and triangles). (BOTTOM) Seismic activity in a 2-year period (1997-98) illustrates the likely distribution of sources the proposed array will observe.
